

Online firmware program upgrade instructions

1. After exiting the **Stream Controller** software (be sure to exit the software), open the firmware upgrade folder and find the **【UpDateToolV3.exe】** application (note: the extracted path can only contain letters and numbers, preferably in the root directory of the D drive)

2. Identifying the firmware model indicates successful connection, Confirm again whether the firmware file names in the small red box are consistent, Click on **【Start】** to upgrade the firmware (note: the machine will go black during the upgrade process)

3. After waiting for the progress bar to reach 100%, it indicates that the firmware program upgrade has been successful.
